

Student Testimonial

1. What was your background before joining IBM SkillsBuild? What challenges were you facing?

Before joining IBM SkillsBuild, I was mainly focused on my college studies and I did not have much practical exposure. I was confused about what skills I should learn outside my syllabus. Sometimes I also lacked confidence in coding and technology, and it was difficult for me to manage college work and learning new things together. I also had limited opportunities to learn through paid courses, so I was looking for free learning opportunities.

2. How did you find IBM SkillsBuild and why did you join?

I came to know about IBM SkillsBuild through my friend. I joined because I wanted to learn something different from my college syllabus and get some practical experience. At first, I was not sure if I could understand everything or manage it along with college. But I thought of trying it instead of being afraid of it.

3. What did you learn or work on during the program?

I completed courses like Getting Started with Artificial Intelligence, Getting Started with Cybersecurity, Level Up Cybersecurity with Generative AI, and the IBM Bob troubleshooting lab.

I also worked individually on my project CareerCompass – Agentic Career Intelligence Platform. While building it, I faced many errors and problems. Instead of asking my friends every time, I started trying to understand the problem and fix it myself. This was one of the most useful things I learned.

4. How did IBM SkillsBuild change you?

The biggest change for me was confidence. Earlier, whenever I got stuck in a project, I usually depended on my friends. During this experience, I completed my project on my own, even though I had many ups and downs.

I learned that making mistakes is okay if I try to understand them and learn from them. Now I feel more confident that I can learn something new and try to solve problems by myself.

5. What would you tell other students who are hesitant to join?

I would say just give it a try. Even if you feel that you don't know enough or you are afraid that it will be difficult, you can learn step by step. I also had doubts before joining, but after doing it, I felt very happy that I tried.

For me, IBM SkillsBuild was not only about completing courses. It gave me a chance to build something by myself and understand that I can learn without always depending on someone else.

My Experience in One Short Summary

IBM SkillsBuild gave me practical exposure and helped me improve my confidence and independence. I learned how to face mistakes, troubleshoot problems, and complete a project on my own. It also made me more interested in learning new things beyond my college syllabus. I am really happy that I got this opportunity and was able to experience learning in a different way.

“IBM SkillsBuild helped me believe that I can learn, make mistakes, solve problems, and grow on my own.”
